- Low Code/No Code Solutions
- IV&V

DATA SOLUTIONS

- Enterprise Architecture
- eDiscovery Life Cycle Management
- Data Governance
- BI and collaboration tools

MANAGEMENT CONSULTING

- Program/Project Management
- Agile Coaching & Implementation

Implementation Experience:

- Migrated 5 custom applications, for HRSA (Human Resources and Service Administration), from on-prem to Azure cloud and also upgraded applications to run on Windows 2016 and SQL Server 2017. Implemented cloud best practices for application hosting and realized 40% cost savings on cloud infrastructure required to maintain HRSA's custom enterprise applications.
- Developed a custom application (Personnel Action and Payroll Management System) for HRSA using ASP.Net, C#, Angular, SQL, and Tableau platform. Performed requirements gathering, created wireframes, prototype user interface and obtained customer validation. The system was developed and deployed on time and within the budget. This helped HRSA offices and Bureaus to prepare and plan for staffing and budget needs.
- Implemented HRSA AMS Custom Application Portal (HACAP) to integrate with HHS Access Management System to provide a unified authentication mechanism for multiple applications resulting in cost reduction.
- National Institute of Health (NIH) - Focus is a new web application used to provide the National Institute of Allergy and Infectious Diseases (NIAID) / NIH with detailed information about vendor contracts including hours, dollars and projected spending. Technologies mainly used in implementing this application are .NET, C#, SQL Server, and Vue.js.
- The international child support payments (ICSPS) at the Administration of Children and Families (ACF) agency are sent/received using checks. We have designed and developed a custom application for electronic payments for both incoming and outgoing payments for Germany, Switzerland, Norway and other European countries. We have used Core Java, Spring Boot, Restful Services, AWS and Postgres.
- USPTO Slick System - SLIC is Sequence Listing Information Control intended to facilitate the acceptance of the new WIPO Standard on the Presentation of Nucleotide and Amino Acid sequence listings using extensible Mark-up Language (XML). We have used Core Java, Spring boot, AWS, Postgres, Restful Services, React JS.

What Differentiates Skysoft From Competitors

- Vast experience in implementing cutting-edge technology solutions using Java, Dot Net, AWS, Azure, DevSecOps etc.
- Excellent track record of client relationship and ratings from our customers
- Thorough knowledge and understanding of complex IT applications and their Operations
- Highly skilled and experienced technical resources
- Mature and time tested processes used to ensure reliable delivery
- Integrated Solution Teams that provide comprehensive and timely delivery
